

Calibration Kit 2075

Calibration Kit for Models 7001, 8001 and 8002

- 3 Minute Calibration Process
- No PC Interface Needed
- Calibration Performed Using Sensor Interface/Controls
- One Kit Performs up to 20 Calibrations

The Calibration Kit model 2075 includes all of the necessary components for calibrating the Telaire® 7001 and the Ventostat® 8001 and 8002 models. The kit is housed in a carrying case with only one replacement part (calibration gas) required. Each 16 liter gas bottle can perform up to 20 calibrations.

By doing your own calibrations, you will save time and money and avoid down time waiting for factory calibration.

The kit features quick, easy connections to the monitor and gas bottle. The “zero” calibration process can be completed in less than 10 minutes.

Calibration Process

The calibration is simple and can be done in just a few minutes. Each CO2 model has a calibration process similar to the following:

- Connect the tubing assembly to the sensor and connect the regulator to the gas bottle.
- Initiate the calibration process by using the sensor buttons and display.
- The process is automatically run by the sensor and will signal upon completion.
- Last, disconnect the tubing and gas regulator.

2075 Components

The Calibration Kit Model 2075 includes:

- Instruction sheet
- One bottle of nitrogen gas
- Tubing assembly
- Gas regulator with guage
- Carrying case.

Compatibility

Calibrates the following models:

Telaire® 7001

Ventostat® 8002W

Ventostat® 8002P

Ventostat® 8001W

Calibration Set-Up

The illustration shows the complete set-up for calibrating the Ventostat® 8002W.
